Carl Sutton,

Scott Stuart has written a [new post](#) in the thread [Column means example in lecture](#) on the [Week 2 Lectures](#) forum for the [R Programming](#) online course.

You generally need to explicitly capture a returned value if you want to store it... you can, however, use `.Last.value` to retrieve the last result if needed:

```
> colMeans(airquality)
      Ozone      Solar.R      Wind      Temp      Month      Day
      NA          NA  9.957516  77.882353  6.993464  15.803922
> .Last.value
      Ozone      Solar.R      Wind      Temp      Month      Day
      NA          NA  9.957516  77.882353  6.993464  15.803922
```
